# Problem statement

A python application that:

Receives weather input and stores it

Presents statistics in a readable format

Forecasts weather

# App overview

Entering data: Date, Weather, Temperature, Humidity and wind speed. Stored in a CSV file.

View statistics:
1) Min., Max. and Average temp between two dates
2) Temp graph between two dates
3) Record Breaking info across data

Search: Observation by date, temperature, condition and season

# App overview cont.

Forecast Weather: Predicts tomorrow's temperature based on the past 7 days.

View all observations: Display all recorded data along with relevant statistics.

Comparison: Statistics comparing the current year with the past year

THANK YOU
